

XERF™

STRUCTURAL SKIN TIGHTENING

Frequently Asked Questions

How long does a treatment take?

A session usually takes about 45 minutes, although the time can vary depending on the treatment areas. The number of sessions needed depends on your individual skin condition and goals. Your provider can help you develop a plan that is right for you.

When can I resume my daily activities?

You can resume your daily activities immediately after the treatment.

Does it hurt?

The XERF treatment has been carefully designed with comfort in mind. The treatment feels warm and comfortable, thanks to Integrated Cryogen Delivery that monitors the temperature of your skin, and Wave Fit™ pulse, which balances energy delivery with a cooling effect. Unlike some other treatments, there are no needles, and no numbing required.

When will I see results?

You will immediately feel what patients describe as a tighter feeling in their skin. In the weeks after the treatment your collagen will continue to rebuild, enhancing your skin's appearance over time.

Brooke, actual patient

Intended for distribution in the United States only.

The XERF device is intended for use in dermatologic and general surgical procedures for electrocoagulation and hemostasis.

All instances of the term "skin tightening" are used to describe tightening effects that occur via soft tissue coagulation. Patient was compensated.

Cynosure, LLC and Lutronic Aesthetic, Inc. do not diagnose or treat medical conditions, prescribe treatment protocols, provide medical advice, or otherwise practice medicine. Patient should consult with a qualified healthcare professional for diagnosis and proper treatment protocols/parameters to determine if treatment with any product is right for them. Qualified healthcare professionals are responsible for diagnosis and treatment protocols using products.
